## December Meeting Details

*Cloud Computing: An Auditor's Perspective*  
Sailesh Gadia, KPMG

Sailesh (Sai) Gadia, CISA, CPA, CIPP is a Senior Manager in KPMG's IT Advisory Services practice in Minneapolis, Minnesota. He has over twelve years of combined experience serving large financial services, insurance, healthcare and IT companies. He has an extensive background in designing, implementing and assessing IT controls in various industries and third-party service organizations. He was a speaker on Cloud computing at ISACA's North America Computer Audit, Control and Security Conference (NACACS) conference in Chicago in April 2010, a guest speaker at Creighton University in March, and at ISACA Minnesota Chapter last year. His article on the topic was published in the ISACA Journal, Volume 6, 2009.

### Upcoming Training Opportunities

#### ***Omaha Chapter***

COBIT Foundations (16 CPE) and Implementing IT Governance Using COBIT and Val IT (16 CPE) courses. January 24-27, 2011. Register by November 30, 2010 to qualify for the early-bird discount! <http://www.isaca-omaha.org/events09.htm>

#### ***The Atlantic Provinces Chapter of ISACA***

The Atlantic Provinces Chapter of ISACA is pleased to announce an online session related to the Payment Card Industry Data Security Standard for its members and associates. The webcasted event will be held on Thursday, December 9th, 2010 at 12:00pm AST and will last approx. 75 minutes using BrightTalk. The Payment Card Industry Standards Council has developed a Data Security Standard, or PCI DSS. The PCI DSS is a set of comprehensive requirements for enhancing payment account data security developed to help facilitate the broad adoption of consistent data security measures on a global basis. A recent IIA/GAIN Knowledge Briefing "Moving Toward PCI Compliance" reports that many organizations have struggled in their compliance efforts. IT auditors can play an important role to help their organization comply with this standard and manage the risk to their organization.

This presentation will address:

- The key issues facing organizations in the journey to PCI compliance
- Emerging issues and the direction the standard is headed (the standard is not static)
- How IT auditors can play a vital role in PCI compliance and assessment and reporting/ attestation.

Presenters: James Murray, CA, CISA, CIA, CGEIT, PCI QSA and Bashir Fancy, MD

\$35 members, \$45 non-members, 2 CPE, <http://www.isaca-atlantic.ca/registration/>

The Certified Information Systems Auditor (CISA) is ISACA's cornerstone certification. Since 1978, the CISA certification has been renowned as the globally recognized achievement for those who control, monitor and assess an organization's information technology and business systems.

The Certified Information Security Manager (CISM) certification is a unique management-focused certification that has been earned by more than 13,000 professionals since its introduction in 2003. Unlike other security certifications, CISM is for the individual who manages, designs, oversees and assesses an enterprise's information security.

The Certified in the Governance of Enterprise IT (CGEIT) certification program was designed specifically for professionals charged with satisfying the IT governance needs of an enterprise. Introduced in 2007, the CGEIT designation is designed for professionals who manage, provide advisory and/or assurance services, and/or who otherwise support the governance of an enterprise's IT and wish to be recognized for their IT governance-related experience and knowledge.

The Certified in Risk and Information Systems Control™ (CRISC) certification is designed for IT professionals who have hands-on experience with risk identification, assessment, and evaluation; risk response; risk monitoring; IS control design and implementation; and IS control monitoring and maintenance. CRISC recognizes a wide range of professionals for their knowledge of enterprise risk and their ability to design, implement, monitor and maintain IS controls to mitigate such risk.

# News from ISACA

## A New Look for CISA, CISM, CGEIT

In alignment with ISACA's product branding strategy, and in keeping with the new CRISC logo design, ISACA has redesigned its certification logos. The new, more clean and current CISA, CISM and CGEIT logos incorporate the text, "An ISACA Certification," which helps identify each certification as belonging to ISACA and supports the trust and value of ISACA certifications as a unique product family. Each certification will maintain its own identity within the portfolio through use of color.

## ISACA Introduces Membership Level Program

ISACA has implemented a "Member Level Program" to recognize and honor long-term members, and to encourage them to maintain continuous membership in ISACA. Members will be receiving information on the program via the @ISACA newsletter. A level is earned based on years of *consecutive* membership as it relates to the year a person joined. If someone let his/her membership lapse and later re-joined, the level will be based on his/her most recent join date. Membership levels and years of membership are as follows:

- Bronze** - 3-4 consecutive years of membership
- Silver** - 5-9 consecutive years of membership
- Gold** - 10-14 consecutive years of membership
- Platinum** - 15 or more consecutive years of membership

The 2011 membership card carriers will include a congratulatory message to those who achieved a member level, and the membership card itself will list their level.

## 2010 ISACA Online Holiday Shopping and Workplace Internet Safety Survey

As you are finishing your holiday shopping list in preparation of Black Friday or Cyber Monday, consider the results of the ISACA Online Holiday Shopping survey. ISACA surveyed 837 business and IT professionals and members of ISACA who reside in the United States. The complete results can be found at [www.isaca.org](http://www.isaca.org).

- 49% of the respondents thought that the average employee spends five or fewer hours shopping online using company equipment. 11% indicated employees spend more than 20 hours shopping using company equipment.
- 55% expected employees to spend about the same amount of time this year shopping online at work as they did last year.
- 61% indicated that the organization limits (restricts or prohibits) online shopping using company equipment, by limiting use to non-work hours (22%), preventing access to certain sites (30%), or prohibiting (9%) online shopping.
- 32% of the respondents indicated that their organization loses \$15,000 in terms of productivity due to online shopping.
- 25% of the respondents indicated the organization prohibits access to social networking sites, and another 42% impose some limitation (preventing access to sites or limits use to lunch, before/after work).
- 15% of the respondents thought that personal use of work computers resulted in at least 50% of the information security incidents.
- 67% indicated using work email for personal correspondence was a moderate or high risk to the organization, but only 33% indicated their organization bans the use of work email addresses for personal business.
